

Key Features:

- Rugged Mobile Internet Connectivity
- AlwaysOn™ Mobile WiFi Hotspot
- Fully Managed Service
- Preconfigured Hardware
- Managed Updates
- Low Cost Connectivity
- Nationwide 4G LTE Coverage
- Simple Billing Options

InternetAnywhere®

Go-Anywhere, High-Speed Internet Access

InternetAnywhere is ideal for recreational vehicles of all kinds because it provides connectivity on-the-go without the hassle of stopping at a marina or a campground just to connect to the Internet. Satellite Internet access systems are often expensive and logistically challenging to implement. With our high-power antennas, InternetAnywhere provides better connectivity than traditional options. With InternetAnywhere, 4G LTE coverage, and 24/7 connectivity make travel planning, usual web browsing, or staying connected to the office more easily accessible.

InternetAnywhere is a fully managed, 4G LTE cellular Internet connection with an onboard WiFi hotspot. It's designed to provide Internet connectivity for remote, mobile, and redundant connectivity applications needs without the hassle of configuring hardware, dealing with cell phone companies, or complex data plans.

With InternetAnywhere you can experience the speed and convenience of broadband Internet anywhere. InternetAnywhere is preconfigured and has an onboard WiFi hotspot that supports up to 50 users, giving you the power of connectivity where traditional Internet

connections are not an option. Once installed, the Vehicle-mounted antennas often provide connectivity when cellular service is unavailable with smartphones. Users connect smartphones, tablets, laptops, and other devices via standard WiFi.

InternetAnywhere features AlwaysOn™ technology, so your high-speed Internet connection doesn't go to sleep like other consumer-grade options. It also features fully managed hardware and a static public IP address.

How It Works

InternetAnywhere is installed within your vehicle, and a multipurpose antenna can be installed on the roof of your vehicle. The antennas are robust, low-profile, and typically includes two 4G LTE antennas and two WiFi Antennas. The antennas provide connectivity to the InternetAnywhere device, which is installed inside the vehicle. A power-sensing power supply allows the unit to be controlled via a control-panel mounted switch. Once powered up, the unit connects automatically to the cellular network and provides Internet access for up to 50 users/devices.

Whether for Recreation, Construction, Farming, Pop-Up Shops, Emergency & Disaster Relief, InternetAnywhere has simple, specially designed plans for you. Talk to your Authorized Akative Representative for installation.
